

**WORKERS COMPENSATION INSURANCE ORGANIZATIONS (WCIO) DATA SPECIFICATIONS
DATA DICTIONARY**

I. INTRODUCTION

The WCIO Data Dictionary defines the data element names contained within the WCIO Data Specifications Manuals.

The objective is to catalog information such as meaning, usage, and format with regard to all the data elements contained in the WCIO EDI standard.

The structure of the WCIO Data Dictionary is as follows:

Data Element Name:	The name given to the data element contained in the flat file specification.
Data Element Number:	The unique number assigned to the data element name contained in the flat file specification.
Definition	A brief description that explains the meaning of the data element. The definition will apply to all WCIO products although the exact use of the data element will be governed by the individual products and record types.
Product:	The list of all the individual products (within the WCIO Data Specifications Manual framework) that use the data element in the flat file specification.
Format:	The format describes the data type and how the data will be interpreted in the file.

For production purposes, product and format information have been combined since format may vary by product.

Refer to the section "Data Dictionary Formats" for specific information regarding format.
